DETAILED ACTION

DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Ermer et al (Us Patent No 4,378,610).

Ermer et al teaches a method and apparatus as claimed.

See entire document, especially Fig. 2 , 3 and Description of the Preferred Embodiments.

Ermer et al teach a method and apparatus for cleaning with brushes with grounded conductive bristles. The disclosed bristles eliminate electrification of the substrate to be cleaned and are in contact with a plurality of the portions of the substrate to be cleaned during cleaning. The bristles are capable of coming and into contact and capable of separating from the substrate to be cleaned.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Patents 5,364,472, 5,928,434, 6,103,016, 5,837,064, , 5,409,418, 6,972,967, 6,282,812, 5,651,834 are cited to to show the state of the prior art with respect to methods and devices for cleaning and mitigating electrostatic charge during cleaning.

5. The examiner would like to make the following comment: the examiner understand that what is disclosed by the specification and illustrated by the drawings of the instant application is different from the disclosure of Ermer et al. However, the pending claims are broad and lack specifics of the inventive method and apparatus. What is claimed now is anticipated by the disclosure of Ermer et al.
